

ONE CHILD **DIES** EVERY 24 SECONDS AS A RESULT OF UNSAFE INJECTIONS.*

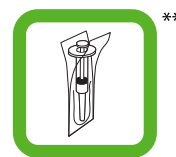

EVERY DEATH IS PREVENTABLE.

SafePoint is a unique trust set up to inform the next generation in the developing world of healthcare issues that can be solved through simple education. SafePoint believe that safe healthcare is a basic right, and is helping to achieve the Millenium Development Goals of 2015. We work alongside dedicated partners to deliver clear, well-communicated messages** about safe healthcare which save lives.

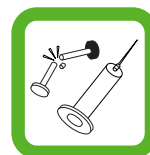

SafePoint's primary focus is to stop the transmission of diseases through the reuse of medical syringes. Unsafe healthcare practise and public ignorance have combined to allow contaminated syringes to become one of the most effective transmission routes for HIV and Hepatitis B and C: according to the World Health Organisation, unsafe injections lead to 22 million infections and 1.3 million deaths each year.

Safepoint tells of the dangers involved in unsafe injection practise and more importantly how to avoid them.
